

NEW GENERATION LIGHTBOXES

YBP: Your Branding Partner uses cutting edge technology to manufacture and produce quality illuminated and non-illuminated frames with print for indoor and outdoor use, country wide. The prints are easy to install and easy to change through a solution that uses a rubber edging on the fabric and a rubber groove slot on the frame.

Applications: Architects and Interior design companies across the country use our lightboxes for wall art, to replace wallpaper, for office partitions, and to enhance boardrooms, ceilings, reception areas, bedrooms, passages, hotels, restaurants, exhibitions, conferences, home staging, special events and much more.

Frames: Aluminium, Powder Coated, custom sizes, single and double-sided, stand alone or wall mounted options. We produce frames and lightboxes up to 3mx10m.

Printing process: YBP uses the latest large format digital printers in a photo Dye Sublimation process to bring even the most intricate patterns or sharp lines to a high-precision finish that truly captures the essence of your design. High resolution and high impact is what we strive for.

LEDs: Our latest LED lights are high dispersion, low energy and carry a 3-year guarantee and usually lasts between 5 and 10+ years. Plug and play replacement modules. Voltage: 220V Power: 32W/set. Colour Temperature: 8000- 9000K. Daylight Bright White – No Discoloration. High dispersion allows for extremely thin frames with even bright lighting across the largest frames. Inverters are small format & mounted within the frame. LEDs are dimmable (optional extra). Warm light LED options are also available, quoted on request.

Fabric: We use Polyester based fabric that is backlit. Indoor prints last for many years before any fading and are fully washable. Outdoor prints, start to fade after 6 months to 1year. Hand wash preferable and steam iron afterwards to remove any wrinkles.
